Personal Lab Overview: AI-Powered Job Application Tracker

Author: Jeffrey Kue
Date: 3/21/26

What is it? A Python-based system that integrates the Gmail and OpenAI API classification to automatically extract, filter, and structure job application emails into an excel sheet. Using Codex apart of the process.

Problem:
Job applications are scattered across email, it is difficult to track:

- Where I applied
- Current status
- Responses and follow-ups

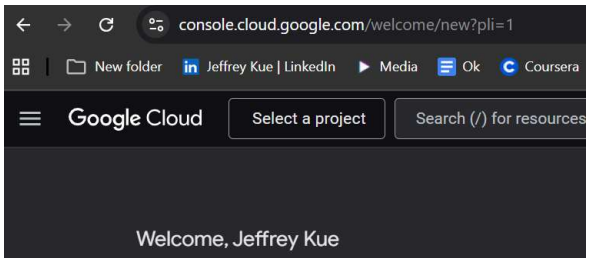
Step 1: Ensure you have Python AND Python script installed.
https://github.com/kuejeffrey/gmail-job-application-tracker.git

Step 2: Enter command into terminal
pip install --upgrade google-api-python-client google-auth-httplib2 google-auth-oauthlib openpyxl

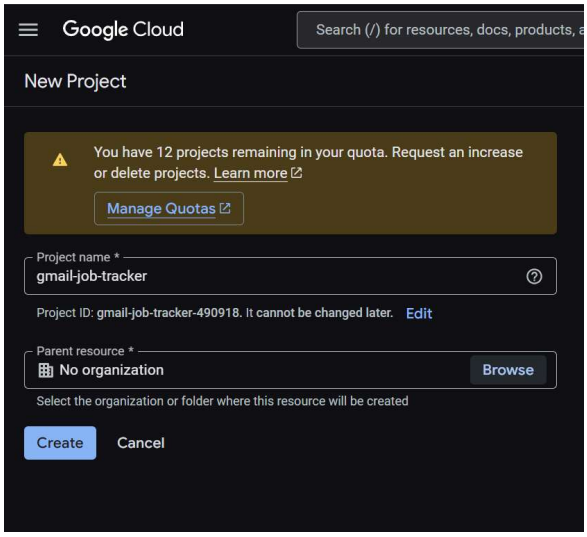
Step 3: Go to Google Cloud Console
https://console.cloud.google.com/welcome/new?pli=1

Step 4: Setting up Google Cloud Console

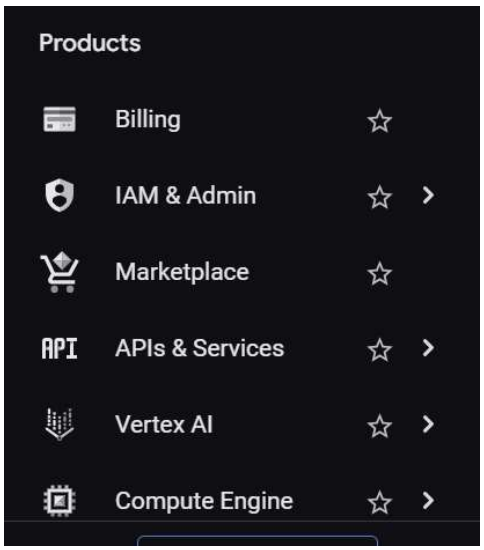
Select Project



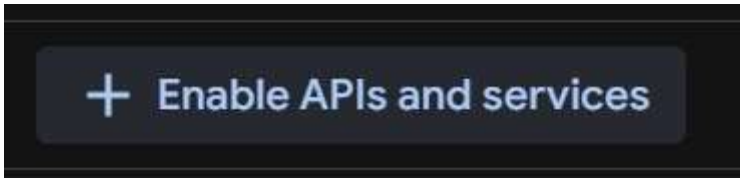
Name it gmail-job-tracker



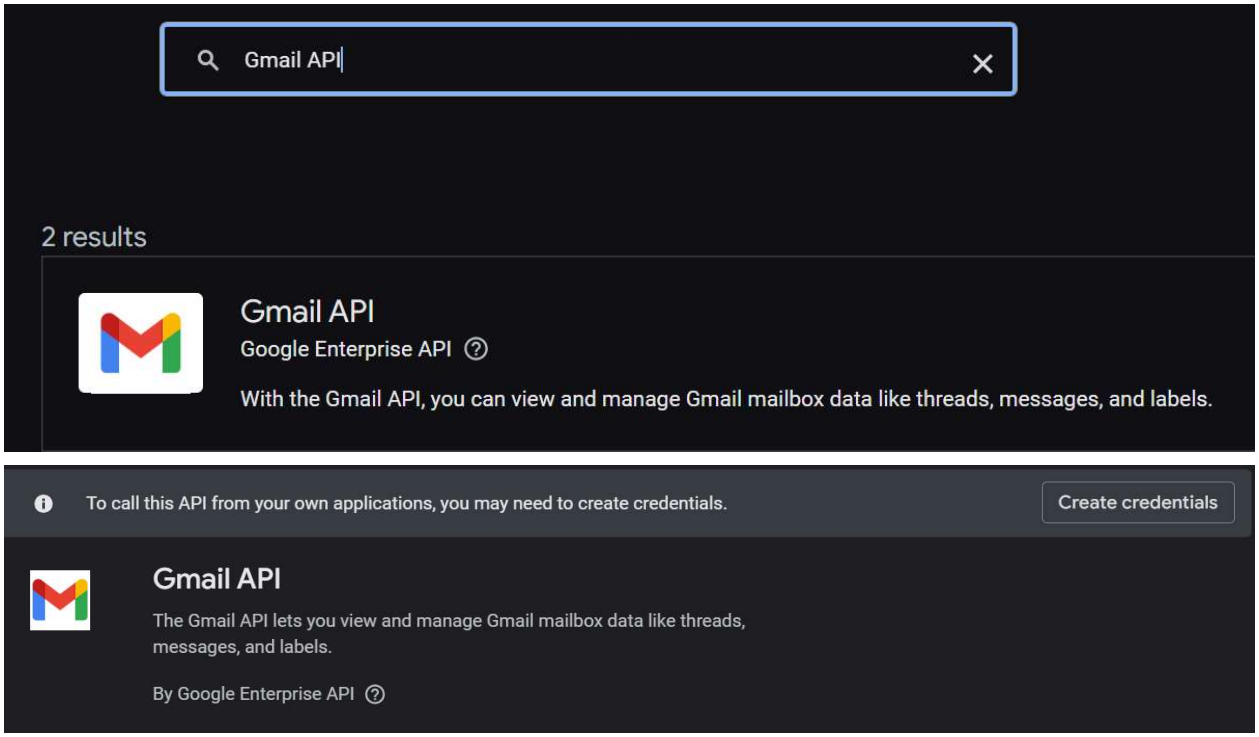
Click API and Services from left bar:



Enable APIs and services:



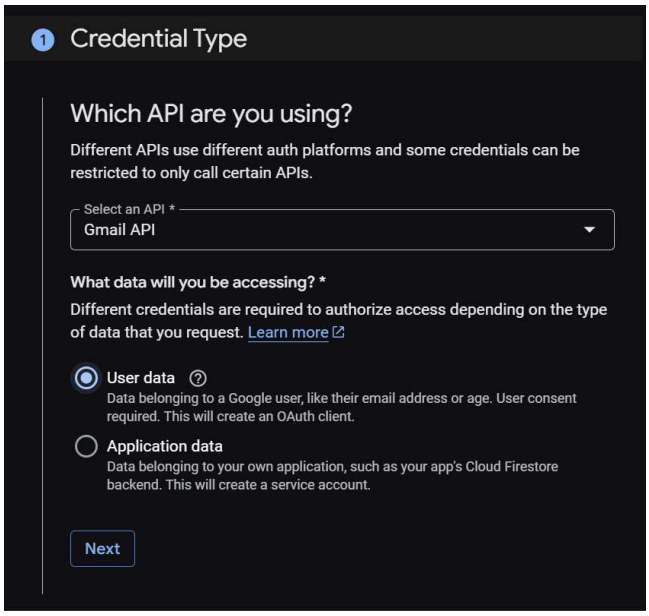
Look up Gmail API and enable in search bar:



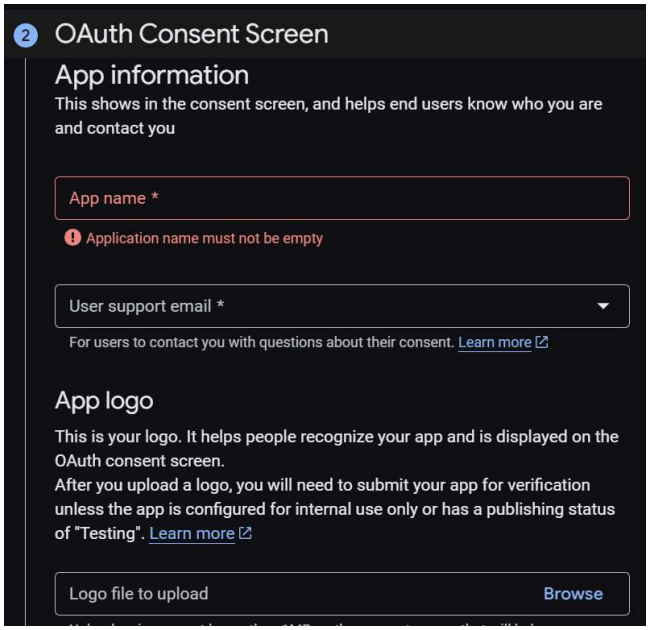
Select User data, name your app, and select Email address you want to track.

Step 5: Install packages/Gmail API

Step 5.1

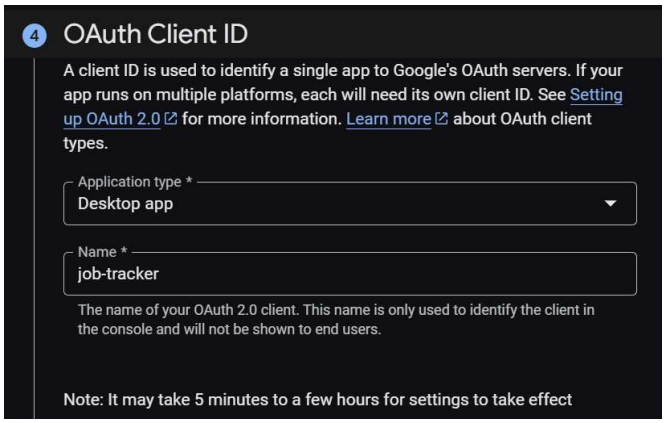


Step 5.2

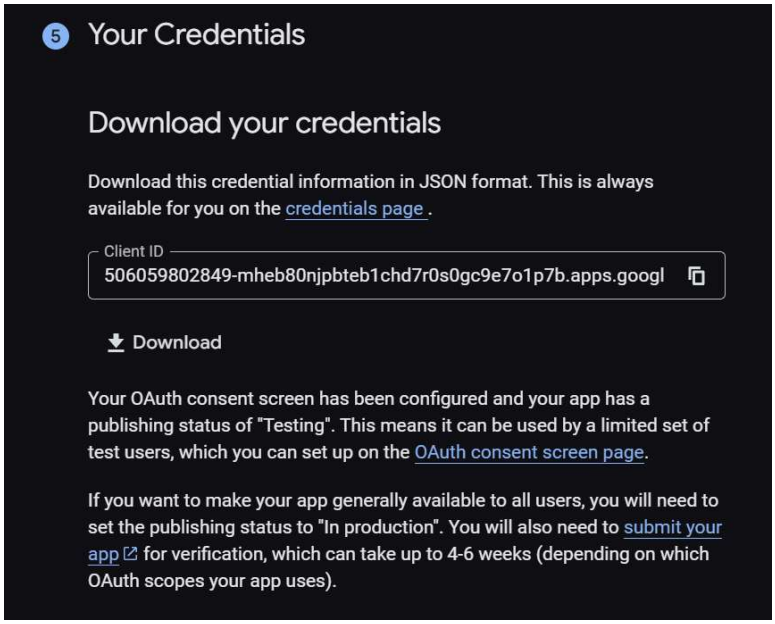


Step 5.3
For my project, since it's personal use and my own project I am skipping scopes portion. Scopes are permissions your app is asking for.

Step 5.4

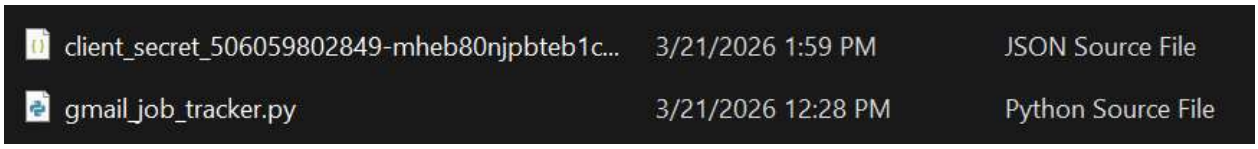


Step 5.5:
Download file



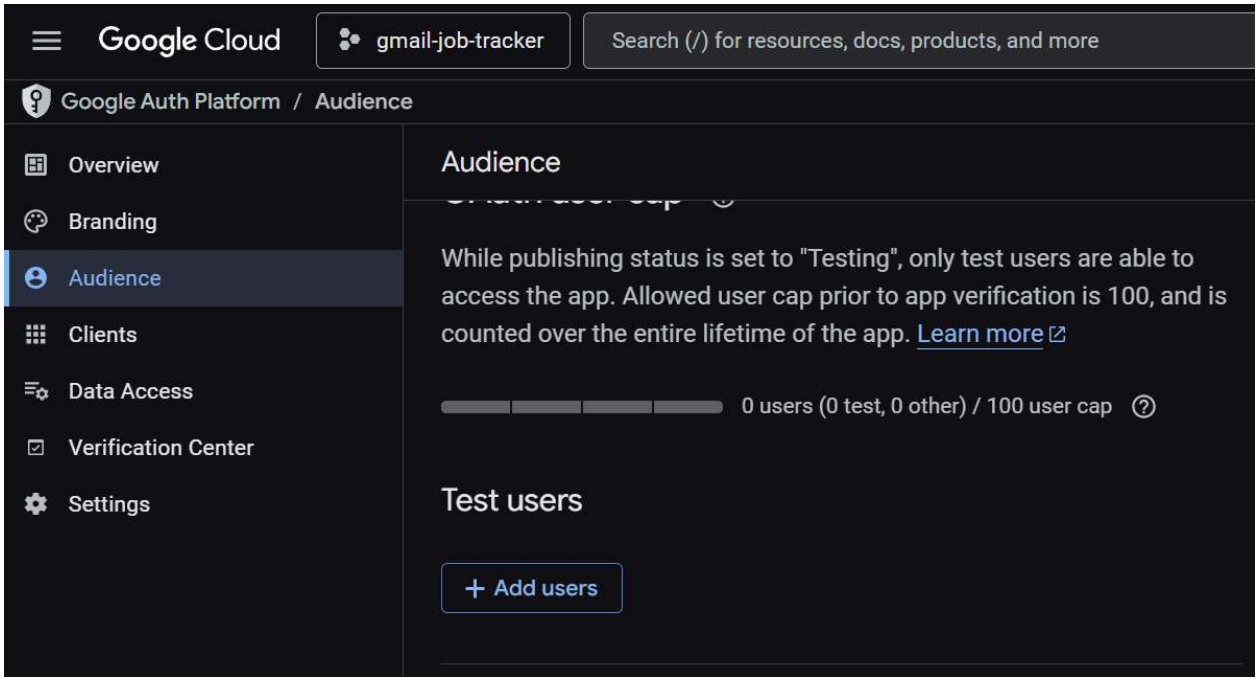
Step 5.6

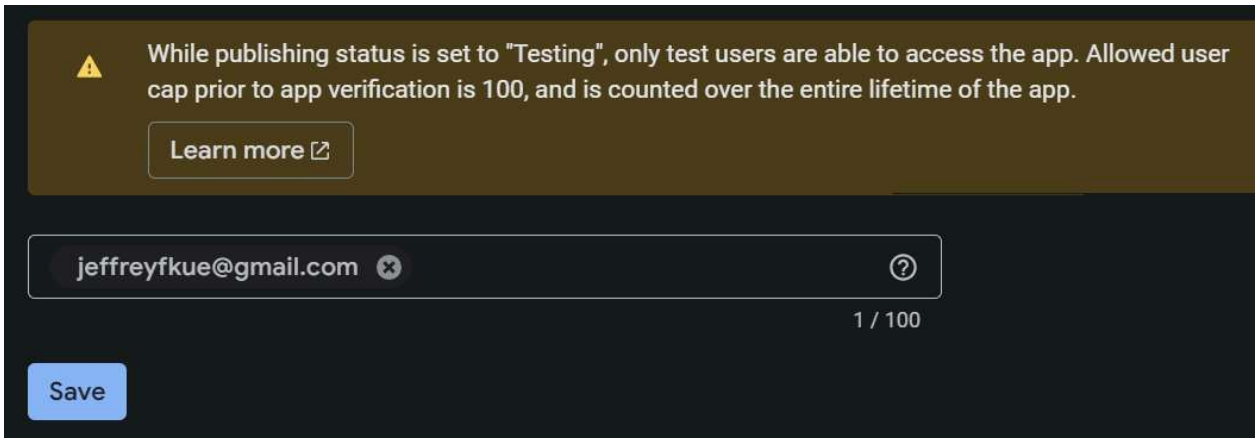
Ensure to move it into the same folder as the .py file.



Change client_secret….json file to credentials.json

Step 6: Ensure to add yourself as a user before running script.



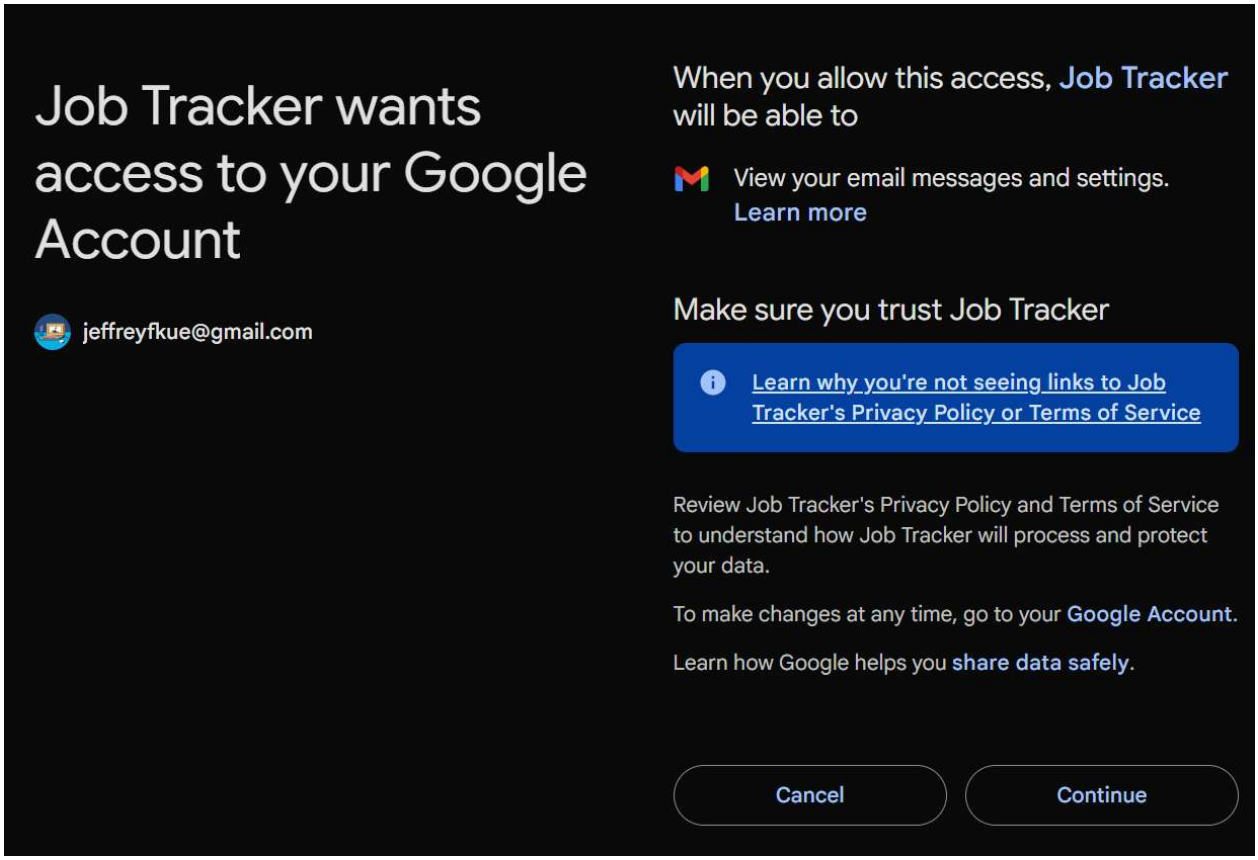


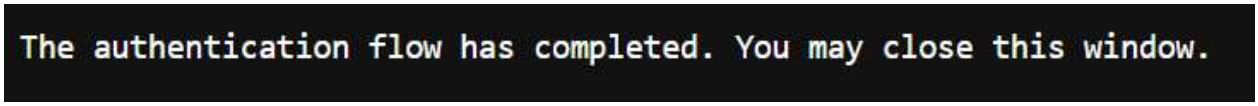
Step 7: Run script in terminal

In terminal, change directory to project folder where files above are located.

Enter command: python (yourfilename).py

```
PS C:\Users\jeffr\Visual Studio Projects\Gmail_Job_Tracker> python gmail_job_tracker.py
```





```
PS C:\Users\jeffr\Visual Studio Projects\Gmail_Job_Tracker> python gmail_job_tracker.py
